

May 1, 1969

Mr. Calvin Lieberman, Treasurer,  
Municipal Services Inc.,  
303 Bell Building,  
Toledo, Ohio 43624

Dear Mr. Lieberman:

As was explained to you and Mr. Dorrell, a decision on pending requests for you to accept certain materials from manufacturers would be made after April 25, 1969. On this date, State of Ohio, Department of Health personnel clarified and explained certain areas of the State Solid Waste Disposal Act.

The following materials will be acceptable at the Manhattan Dump Site:

- 1) Cullet and demolished glass products, brick, mortar from kiln re-building, sand, glass run-out scrap from Owens-Illinois.
- 2) Demolished pallets and wood crates from Toledo Scale Company.
- 3) Demolition and construction materials from Henry J. Spieker Company.
- 4) Construction debris from McHerney and Son, Inc.

Those waste materials which must go to a sanitary landfill are:

- 1) Dana Corporation sludge which contains breaking cutting oils.
- 2) Paper dust from Owens-Illinois (due to breakdown, decomposition and rat harborage).
- 3) Fiber glass materials from John Mansville Fiber Glass, Inc. (due to chemical reactions taking place resulting in hydrogen sulfide odors).
- 4) Those Benton Village loads containing any garbage whatsoever. This firm has previously been in violation.

It is hoped that any future request can be considered more promptly by this Division.

Sincerely,

T. T. Kuhlmann, D.V.M., M.P.H., Chief,  
Division Environmental Health and Food Control.
